## MICRO LIFE PRESERVER

Lightweight, low-profile life preserver

**The Micro LPU is a lightweight, low-profile, high-performance life preserver designed to protect users following immersion in water.** Almost unperceivable to the wearer in use, the Micro LPU is a new innovation in life preserver design to minimise the weight and bulk of high-performance life preserver units (LPU) when compared to traditional systems on the market. Using newly developed and unique materials has enabled the lighter weight system to be developed whilst maintaining the robustness and durability needed for the marine environment.

## BENEFITS

- ⦿ No interaction with helmets
- ⦿ High performance self-righting capability providing a typical freeboard of 4½" (120mm) and optimum floatation angle
- ⦿ Dual Bladder design to provide secondary inflation capability
- ⦿ Each chamber fitted with a single flexible oral tube for topping up purposes
- ⦿ Provides positive buoyancy from depths of 72 feet (22m)
- ⦿ Integrates with a wide range of Plate-Carrier systems using the MOLLE attachment system
- ⦿ Standalone harness available

*“Lowest profile, high performance  
Life Preserver on the market”*

## TECHNICAL DATA

### MICRO LPU

|                             |   |
|-----------------------------|---|
| <b>Material</b>             | Manufactured using the latest innovations in TPU enhanced materials.            |
| <b>Compliance Standards</b> | EN ISO 12402-2  |
| <b>Buoyancy</b>             | 65lbs (290N)  |
| <b>Thermal Resistance</b>   | Flame retardant when tested to ASTM F1930                                       |
| <b>Colours</b>              | Available in Ranger Green, MAS Grey, MTP (UK & US), Coyote Brown and Desert Tan |
